

Principal Investigator: Dr. Beatrice Golomb

SEEKING PARTICIPANTS WITH ELECTROMAGNETIC HYPERSENSITIVITY (EHS)

Goal: To investigate the genetic factors associated with electromagnetic hypersensitivity and its symptoms.

Electromagnetic Signals & Genetics

Eligibility Criteria:

- Individuals who experience electromagnetic hypersensitivity (EHS).
- All individuals who feel they suffer from this condition are welcome, you do not need a confirmed diagnosis.
- Interested individuals will complete a screening survey for eligibility.

Study Participation Includes:

- EHS symptoms survey
- Cheek swab sample for DNA collection
- Testing is free
- You will get access to your whole genome data

Study's Purpose:

We seek to learn why some individuals experience electromagnetic hypersensitivity. Understanding genetic risk factors will help us to understand the mechanisms of EHS, which can help identify candidate treatments.
